

JASON JONES

Systems Administrator & DevOps Engineer

Sioux Falls, SD 303-885-2018 jasonjones21@att.net github.com/RamenAnime
ramenanime.com

PROFESSIONAL SUMMARY

Systems Administrator and DevOps Engineer with 12+ years of experience managing multi-site IT infrastructure, enterprise servers, high-availability networks, and cross-functional operations. Proven track record replacing manual workflows with custom automation, full-stack software, and CI/CD pipelines. Experienced in security incident response, SIEM deployment, firewall forensics, and third-party compliance coordination during active breach investigations. Strong bridge between engineering execution and frontline technical operations with a focus on reliability, uptime, and measurable operational outcomes.

CORE SKILLS

Systems Administration: Windows Server, Linux (RHEL, Ubuntu, Arch), UniFi Networking, VLAN Routing, Bare-Metal & Cloud Provisioning, TrueNAS SCALE, CRM & Ticket Platforms

DevOps & Automation: CI/CD Workflows, Git, GitHub, Containerized Deployments, Automation Engineering, Render, Python Scripting

Security & Incident Response: SonicWall GMS, Firewall Forensics, Wazuh SIEM, Endpoint Threat Hunting, Malware Identification, Network Segmentation, VPN Controls, Botnet & Intrusion Analysis

Software Development: React, TypeScript, Node.js, Vite, tRPC, Hono, REST APIs, Drizzle ORM, MySQL, TiDB Cloud, Vitest, HTML/Excel Dashboards

Platforms & Leadership: Karmak DMS, Google Workspace, Microsoft Office, Dell PowerEdge Servers, Multi-Site IT Infrastructure, SLA Compliance, Vendor Coordination, Team Onboarding, Root Cause Analysis

KEY ACHIEVEMENTS

- Led active security incident response at Kenworth of Jacksonville, coordinating with SonicWall vendor (Western NRG) and a third-party compliance team; analyzed firewall forensics across 9,000+ malware block events, identified attack initiator hosts, VPN bypass attempts, and data-harvesting browser extensions; directed Wazuh SIEM deployment across the environment.

- Built and launched a production-ready global marketplace platform with a 42-table relational database, real-time engines, and end-to-end cloud infrastructure as a solo technical project.
- Engineered a live digital dispatch board and internal ticketing system that replaced legacy paper processing, eliminating data lag and improving cross-department workflow tracking.
- Administered distributed multi-site IT systems across several locations with zero external vendor dependency, including hardware procurement, UniFi network architectures, and server provisioning.
- Coached and led a remote technical escalation team of 13 staff in a 24/7 mission-critical Tier 3 environment, handling 500+ advanced technical cases weekly while exceeding SLA and QA baselines.

PROFESSIONAL EXPERIENCE

Systems Administrator, DevOps Engineer & Incident Responder

Kenworth of Jacksonville / PacLease

Garden City, GA

2024 - Present

- Serve as sole IT Administrator overseeing multi-site production infrastructure across two regional locations; deployed UniFi network topologies, managed VLAN routing, and architected localized secure data access layers.
- Lead active cybersecurity incident response: analyzed SonicWall GMS firewall forensics identifying malware-contacting endpoints, VPN-bypass hosts, a data-harvesting browser extension (ntp2.mywavehome.net / wavebrowser), and an attack-initiating internal host; coordinate with firewall vendor and third-party compliance team on forensics timeline and scope. Direct Wazuh SIEM deployment for ongoing endpoint monitoring.
- Engineered, tested, and deployed a custom digital dispatch system, owning the full software lifecycle from development through production, eliminating business status lag and manual paper workflows.
- Perform complete system administration for the enterprise Dealer Management System (Karmak DMS), overseeing access management, data reporting, workflow compliance, and complex transaction tracking.
- Manage hardware lifecycle pipelines including bare-metal server configuration, workstation deployment, and client configuration, reducing technical response intervals from days to under two hours.
- Act as critical escalation point for infrastructure faults, vendor interconnections, and network-attached appliances, maintaining 100% operational availability across distributed logistics and parts facilities.

Systems Coordinator & Shop Foreman

MHC Kenworth

Savannah, GA

2022 - 2024

- Promoted from service tracking to operations foreman to orchestrate technological execution, resource distribution, and technical workflows for a high-output maintenance floor supporting 120+ assets monthly.
- Managed internal resource planning matrices, aligned technician specialization with technical task profiles, and verified end-to-end quality and corporate system documentation compliance.
- Maintained enterprise platform inputs for all in-progress service pipelines, establishing high database entry accuracy and managing client authorizations for system updates.
- Designed technician instructional frameworks and technical standardization documentation that lowered comeback margins and aligned with warranty system requirements.

Site Operations Manager

Genuine Parts Company (IBS) / Liberty County School District

Hinesville, GA

2019 - 2022

- Held end-to-end contractual P&L and technical inventory tracking liability for a Fortune 500-backed on-site operations initiative, administering high-volume procurement budgets and vendor invoicing.
- Supervised a technical support and inventory team of six, executing performance evaluations, professional skills tracking, and operational standard alignment across a multi-year tenure.
- Overhauled local asset tracking protocols to eliminate stock shortfalls, maintaining 90%+ same-day target achievement while consolidating multi-vendor pipelines to limit infrastructure overhead.

Service Operations Manager

Express Oil Change & Tire Engineers

Savannah, GA

2017 - 2019

- Directed multi-shift technical facility operations, managing team schedules, workflow execution paths, systemic safety parameters, and customer-facing technical support channels.
- Elevated site throughput and customer validation trends through workflow standardization and direct SLA compliance.

Remote Technical Support Coach & Tier 3 Case Manager

DISH Network

Remote

2012 - 2017

- Coached and directed a fully remote 13-person Tier 3 advanced technical support team in a 24/7 model handling 500+ complex escalated incidents per week.
- Monitored strict adherence to SLA baselines, qualitative performance metrics, and compliance scorecards; executed targeted technical coaching to lower recurring incident rates.
- Created comprehensive curriculum and conducted deep technical onboarding covering diagnostic procedures, incident recording standards, and compliance frameworks.

TECHNICAL PROJECTS

Ramen Anime | Global Collectibles Marketplace & Social Platform

github.com/RamenAnime/RamenAnime-Portfolio | ramenanime.com

- Full-Stack & Architecture: Designed a production-grade web ecosystem featuring real-time auction bidding, multi-currency engines, and social elements on containerized cloud infrastructure.
- Database Design: Structured a 42-table relational database schema using Drizzle ORM on TiDB Cloud (MySQL-compatible).
- DevOps & Infrastructure: Git version control, Render automated hosting, GoDaddy DNS routing, Vitest/ESLint/Prettier CI/CD pipelines.
- Core Stack: React 19, TypeScript, Vite, Tailwind CSS, shadcn/ui, Node.js 24, tRPC 11, Hono, JWT, reCAPTCHA.

EDUCATION

Associate of Arts, Communication Studies | American Public University System
